

COVID-19 in Islington

Last week (12th July – 18th July)

Deaths 0

New cases per day average 188

Number of daily cases in Islington, 08 March 2020 to 18 July 2021

It is important to note that as mass testing wasn't available until 28th May 2020, many cases early on will not have been tested. Therefore, current number of cases cannot be compared to the start of the pandemic.

Islington has had a total of **19,194** confirmed cases.

Weekly incidence rate = 537 per 100,000

This is higher than London's rate at 450.3 per 100,000 and the 5th highest amongst the 32 London boroughs. This is an increase from last week's rate (350) and is rated red.

9% of tests are positive

For every 1,000 tests taken 90 on average are coming back positive. A weekly percentage over 7.5% is rated red.

These indicators are RAG (red-amber-green) rated to indicate whether they are good or bad.

Green

Amber

Red

Dark red

Maroon

London's R number = 1.2 – 1.4

An R number between 1.2 and 1.4 means that on average every 10 people infected will infect between 12 and 14 other people. If the R value is above 1 the pandemic is growing, if it is below 1 the pandemic is shrinking.
