

COVID-19 in Islington

Last week (27th September – 3rd October)

Deaths 3

New cases per day average 54

Number of daily cases in Islington, 08 March 2020 to 3 October 2021

It is important to note that as mass testing wasn't available until 28th May 2020, many cases early on will not have been tested. Therefore, current number of cases cannot be compared to the start of the pandemic.

Islington has had a total of **25,470** confirmed cases.

Weekly incidence rate = 150 per 100,000

This is lower than London's rate at 204.2 per 100,000 and is the 3rd lowest amongst the 32 London boroughs. This is an increase from last week's rate (137) and is rated red.

3% of tests are positive

For every 1,000 tests taken 30 on average are coming back positive. A weekly percentage under 4% is rated green.

These indicators are RAG (red-amber-green) rated to indicate whether they are good or bad.

London's R number = 0.9-1.1

An R number between 0.9 and 1.1 means that on average every 10 people infected will infect between 9 and 11 other people. If the R value is above 1 the pandemic is growing, if it is below 1 the pandemic is shrinking.
