16	Percentage of individuals who tested positive	2%	3%	Increasing	This week 3% of people tested this week were positive for Covid 19. This is up from last week's position of 2%
17	Individuals tested per 100,000 population (includes pillar 1&2 tests)	848.4	785.1	Decreasing	This week 785.1 people per 100,000 have been tested. This is down from last week's position of 848.4

Contact Tracing

Indicator	Indicator Name	Last week	This week	Direction of travel	Commentary
18	Number of cases via NHS test and trace (cumulative)	21837	22119	Increasing	In total, there have been 22119 cases contacted through the Test and Trace system
19	Proportion of cases successfully contacted (cumulative)	86%	86%	Decreasing	To date, 86% of cases successfully contacted through the Test and Trace system
20	Number of contacts via NHS test and trace (cumulative)	44644	46188	Increasing	In total, there have been 46188 contacts identified through the Test and Trace system

Other

Indicator	Indicator Name	Last week	This week	Direction of travel	Commentary
22	R Number for London	0.8 to 1.0	0.9 to 1.1	Increasing	If the R number is above 1 then the number of cases are going up, if it's below 1 the number of cases are falling across the region.

Indicators 1-3 (COVID-19 deaths): Deaths data are reported with a weeks lag. Deaths by cause of death (weekly numbers and cumulative), for deaths that occurred up to 8 January 2021 but were registered up to 16 January 2021 by week

Indicator 14 (weekly incidence per 100,000 population): This indicator is RAG rated: Maroon >250 cases per 100,000, Dark red 151 to 250 cases per 100,000, Red 51 to 150 cases per 100,000, Amber 25 to 50 per 100,000, Green 150 cases per 100,000, Dark red 101 to 150 cases per 100,000, Red 51 to 100 cases per 100,000, Amber 25 to 50 per 100,000, Green 7.5%, Amber 4% to 7.5%, Green

Indicator 16 (Percentage of individuals who tested positive): This indicator is RAG rated Red >7.5%, Amber 4% to 7.5%, Green

Indicators 16-17: These indicators are using PHE's adjusted approach to testing metrics. Individuals with a positive test are deduplicated across the pandemic. Individuals with a negative test are deduplicated across the preceding 7 days, to exclude repeat negative tests arising from recent multiple testing

Indicator 22 (R number for London): The estimate for the R number is updated on a slower timescale than other indicators. Low case numbers and/or a high degree of variability in transmission across the region means these estimates are insufficiently robust to inform policy decisions
