

Help using the interactive map

Make your selection and place your mouse over an icon to reveal an information bubble. Click on the icon to keep the information bubble open. Use the **X** on the bottom left corner of the map to clear it.

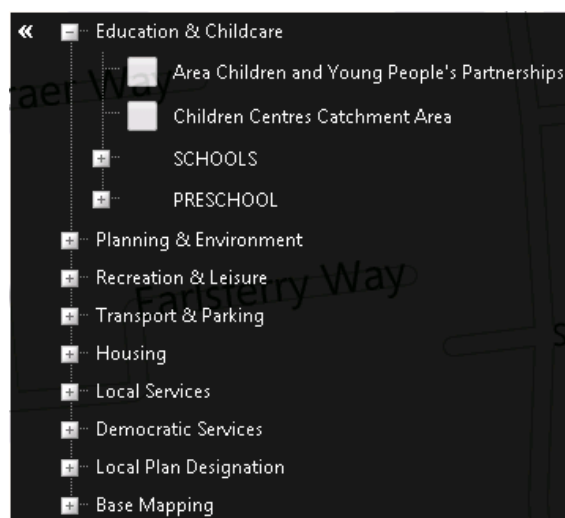

Icons

 - Return the map to the original position, location and zoom level

 - Clear the map layers and remove data from the map

 - Refresh the map to see data after panning the map

 - Change the layer order to see information about the layer while hovering the mouse. The higher the layer number the closer to the top of the visible layers. This will be reset once the browser is refreshed.

Select the layers of data you wish to view on the map.

Where the checkbox is greyed out you need to zoom further into the map

Click the double arrows to the side of the layer list to hide or click the Data Menu tag to toggle the layers on/off.

If the map window has been left inactive for over 10 minutes you will have to refresh the browser window
